description

TM124MBK36B

The TM124MBK36B is a dynamic random-access memory (DRAM) organized as four times 1 048 576 × 9 (bit 9 is generally used for parity) in a 72-pin leadless single in-line memory module (SIMM). The SIMM is composed of eight TMS44400DJ, 1 048 576 × 4-bit DRAMs, each in 20/26-lead plastic small-outline J-lead packages (SOJs), and one TMS44460DJ, 1 048 576 × 4-bit Quad- $\overline{\text{CAS}}$ DRAM in a 24/26-lead plastic small-outline J-lead package (SOJ), mounted on a substrate with decoupling capacitors. Each TMS44400DJ and TMS44460DJ is described in the TMS44400 or TMS44460 data sheet, respectively.

The TM124MBK36B is available in the single-sided BK leadless module for use with sockets.

The TM124MBK36B features $\overline{\text{RAS}}$ access times of 60 ns, 70 ns, and 80 ns. This device is rated for operation from 0°C to 70°C.

TM248NBK36B

The TM248NBK36B is a DRAM organized as four times 2 097 152 × 9 (bit 9 is generally used for parity) in a 72-pin leadless SIMM. The SIMM is composed of sixteen TMS44400DJ, 1 048 576 × 4-bit DRAMs, each in 20/26-lead plastic small-outline J-lead packages (SOJs), and two TMS44460DJ, 1 048 576 × 4-bit Quad- $\overline{\text{CAS}}$ DRAMs, each in a 24/26-lead plastic small-outline J-lead package (SOJ), mounted on a substrate with decoupling capacitors. Each TMS44400DJ and TMS44460DJ is described in the TMS44400 and TMS44460 data sheet, respectively.

[†] Part numbers in this data sheet are for the gold-tabbed version; the information applies to both gold-tabbed and solder-tabbed versions.

SMMS137E – JANUARY 1991 – REVISED JUNE 1995

TM248NBK36B (continued)

The TM124NBK36B is available in the double-sided BK leadless module for use with sockets.

The TM124NBK36B features $\overline{\text{RAS}}$ access times of 60 ns, 70 ns, and 80 ns. This device is rated for operation from 0°C to 70°C

operation

TM124MBK36B

The TM124MBK36B operates as eight TMS44400DJs and one TMS44460DJ connected as shown in the functional block diagram and Table 1. The parity bits are provided by the TMS44460DJ and are controlled by $\overline{\text{RAS2}}$. To ensure proper parity bit operation all memory accesses should include a $\overline{\text{RAS2}}$ pulse. Refer to the TMS44400 and TMS44460 data sheets for details of operation. The common I/O feature dictates the use of early write cycles to prevent contention on D and Q.

TM248NBK36B

The TM248NBK36B operates as sixteen TMS44400DJs and two TMS44460DJs connected as shown in the functional block diagram and Table 1. The parity bits are provided by the TMS44460DJ and are controlled by $\overline{\text{RAS2}}$ on side 1 and $\overline{\text{RAS3}}$ on side 2. To ensure proper parity bit operation, all memory accesses should include a $\overline{\text{RAS2}}$ or $\overline{\text{RAS3}}$ pulse. Refer to the TMS44400 and TMS44460 data sheets for details of operation. The common I/O feature dictates the use of early write cycles to prevent contention on D and Q.

SMMS137E – JANUARY 1991 – REVISED JUNE 1995

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Voltage range on any pin (see Note 1)	– 1 V to 7 V
Voltage range on V_{CC} (see Note 1)	– 1 V to 7 V
Short-circuit output current	50 mA
Power dissipation	9 W
Operating free-air temperature range, T_A	0°C to 70°C
Storage temperature range, T_{stg}	– 55°C to 125°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to V_{SS} .

recommended operating conditions

	MIN	NOM	MAX	UNIT
V_{CC} Supply voltage	4.5	5	5.5	V
V_{IH} High-level input voltage	2.4		6.5	V
V_{IL} Low-level input voltage (see Note 2)	– 1		0.8	V
T_A Operating free-air temperature	0		70	°C

NOTE 2: The algebraic convention, where the more negative (less positive) limit is designated as minimum, is used for logic-voltage levels only.

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)
